

DIVANTE PARNES

U.S. ARMY VETERAN - AUTOMATION ENGINEERING ASSOCIATE

Data Science Bootcamp Graduate

Phone Number: (210) - 248 - 4763 | Email: Divante111@gmail.com

Automation Tester and U.S. Army veteran with a robust background in Data Science from Codeup. Proficient in Python, JAVA, Machine Learning, and Data Visualization. Demonstrated expertise by completing projects to include "Pigskin Paydays" which predicted NFL quarterback salaries (More listed at the bottom of the page). Committed to continuous personal development like learning to mod in mount and blade 2 bannerlord. I look forward to working on complex projects that present a challenge.

EXPERIENCE

U.S. Army Active Duty

July 2013 - Aug 2018

JBER Alaska

- Executed precision room-clearing drills in urban warfare training, emphasizing rapid and methodical entry techniques. This practice honed the squad's ability to navigate confined spaces, reducing response times and enhancing the team's effectiveness in urban environments.
- Participated in joint exercises with allied forces, fostering inter-unit cooperation and cultural exchange. This collaboration improved overall military interoperability, strengthening alliances and promoting a more unified and effective multinational defense posture.
- As a Team Leader, I supervised and guided a squad of infantrymen in daily operations, ensuring adherence to mission objectives and maintaining a high standard of discipline. Through consistent and hands-on leadership, I fostered a cohesive and efficient team dynamic, contributing to successful mission execution and enhancing overall unit morale.

Automation Engineering Associate

Mar 2024 – Current

San Antonio, TX

- Automated Gherkin commands using JAVA selenium
- Utilized Jira to manage Stories
- Used Postman to Test API's
- Used allure reporting to provide accurate insights into Test execution
- Created Docs in Confluence to be used as guides.
- Used Github to manage files.
- Writing defect tickets based off of Tech Tasks
- Utilized Jenkins in order to find and update failing tests
- Navigate multiple repositories using vs code
- Read documentation for new software in order to figure out functionality that exists.
- Utilize AI to write repetitive tests
- Coordinate with co workers to merge functions together that can be used as reusables

Accenture Help Desk Intern

Jan 2024 – Mar 2024

San Antonio, TX

- Reimaged and profiled laptops for optimal performance and security.
- Managed logistics and equipment shipping to end-users.
- Implemented system updates, configurations, and security protocols.
- Connected devices to a secure network to ensure data protection.
- Provided user support and troubleshooting for hardware and software issues.

EDUCATION

Certificate of Completion

Feb 2023 - Aug 2023

Codeup (A 20-week career accelerator providing 670+ hours of immersive, project-based instruction in applied data science. Acquired expertise in the entire data science pipeline and demonstrated proficiency in handling real, complex data to deliver actionable insights to diverse stakeholders.)

PERSONAL DEVELOPMENT

Self-Study in Python

- Linked a SQLite Database to a Flask Application
- Completed Python and JAVA Udemy Courses
- Completed a Udemy Python 2D Pygame course and started learning C# through a unity course.
- WebScraped 1500 Amazon reviews and product details and appended them to an Excel spreadsheet.
- Writing a Java text based video game just for fun

DATA SCIENCE PROJECTS

CAPSTONE PROJECT

[Team-predicting-football-salary/Pigskin_Paydays](#)

In the NFL, every football team in the league is given a certain amount of money that it must then allocate amongst its players. This is known as the team's "cap." When players are up for contract renewal, the most valued players in every team, quarterbacks, ask for salaries far beyond what a team currently evaluates them at, and the two sides go back and forth before they reach a consensus based on the player's actual worth. Our project aims to predict what percentage of the cap will be allotted for a player given his performance in a cycle.
